ABSTRACT

Methods and apparatus for providing network media channels. In one implementation, a system for providing a network media channel includes: a network; a server connected to said network, wherein said server includes storage for storing media files, and a network media channel manager for receiving and sending media files according to one or more media network channels; a publishing client connected to said network, wherein said publishing client includes a media capture component for capturing media data and storing captured media data in a media file, a media editing component for editing media files, and a publishing component for publishing to said server a media file corresponding to a network media channel; and a subscribing client connected to said network, wherein said subscribing client includes a subscribing component for subscribing to one or more network media channels, and a browsing component for accessing media files received according to subscribed network media channels.
